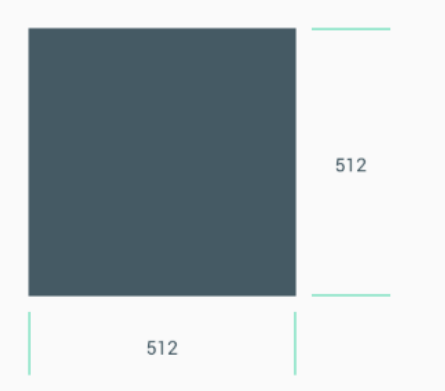
What is WebP in Android Studio?

WebP is an image file format from Google that provides lossy compression (like JPEG) as well as transparency (like PNG) but can provide better compression than either JPEG or PNG.

Images

You can import your own images and adjust them for the icon type. Image Asset Studio supports the following file types: PNG (preferred), JPG (acceptable), and GIF (discouraged).


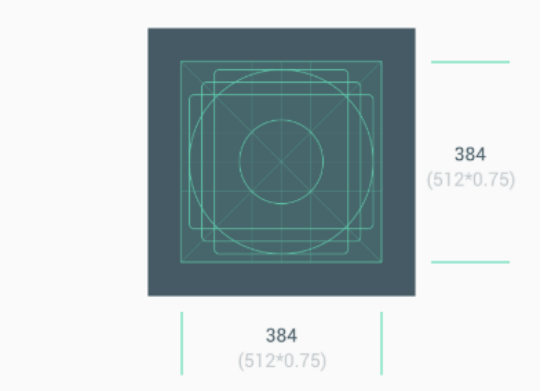


Image Asset Studio places the icons in the proper locations in the res/mipmap-*density*/ directories.
It also creates a 512 x 512 pixel image that's appropriate for the Google Play store.
