9. Splash Screen

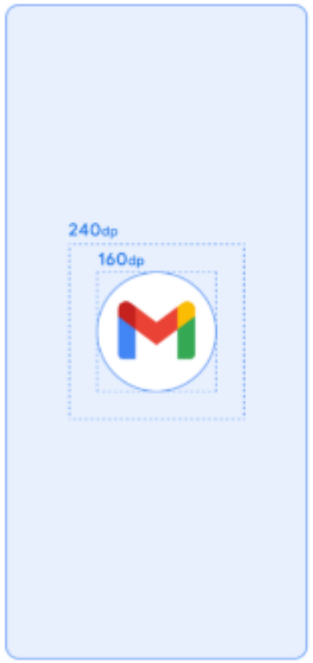
Android Studio

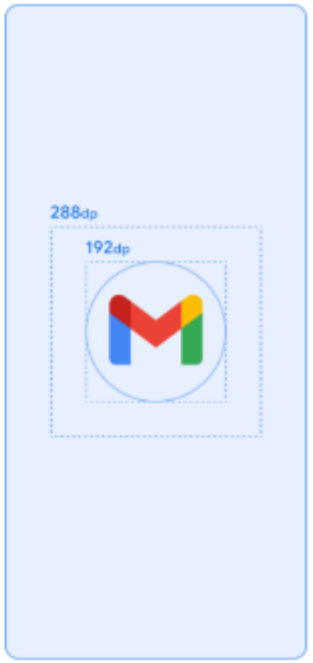
Splash Screen

Splash screen dimensions

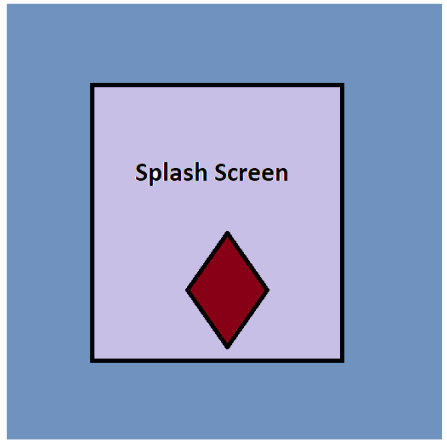
The splash screen icon uses the same specifications as adaptive icons, as follows:

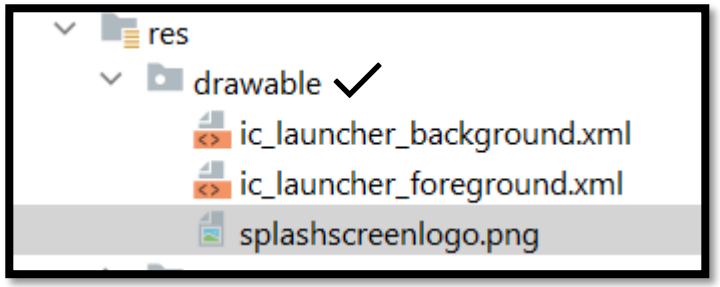
- Branded image: this must be 200×80 dp.
- App icon with an icon background: this must be 240×240 dp and fit within a circle 160 dp in diameter.
- App icon without an icon background: this must be 288×288 dp and fit within a circle 192 dp in diameter.
- For example, if the full size of an image is 300×300 dp, the icon needs to fit within a circle with a diameter of 200 dp. Everything outside the circle turns invisible (masked).
- 1/3 - 2/3





Step 1: Design logo then **Copy/Paste** into **<u>drawable</u>** folder





Step 2: Add the following snippet to your **build.gradle** file

https://developer.android.com/develop/ui/views/launch/splash-screen#kts

Get started

The core `SplashScreen` library brings the Android 12 splash screen to all devices from API 23. To add it to your project, add the following snippet to your `build.gradle` file:

Groovy | Kotlin

```
dependencies {
    implementation("androidx.core:core-splashscreen:1.0.0")
}
```

build.gradle.kts (:app)

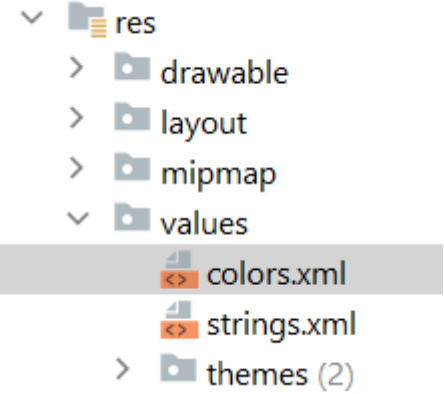
Gradle files have changed since last project sync. A project sync may be necess... Sync Now Ignore these changes

```
    }
}

dependencies { this: DependencyHandlerScope

    implementation("androidx.core:core-ktx:1.12.0")
    implementation("androidx.appcompat:appcompat:1.6.1")
    implementation("com.google.android.material:material:1.11.0")
    implementation("androidx.constraintlayout:constraintlayout:2.1.4")
    testImplementation("junit:junit:4.13.2")
    androidTestImplementation("androidx.test.ext:junit:1.1.5")
    androidTestImplementation("androidx.test.espresso:espresso-core:3.5.1")
    implementation ("androidx.core:core-splashscreen:1.0.0")
}
```

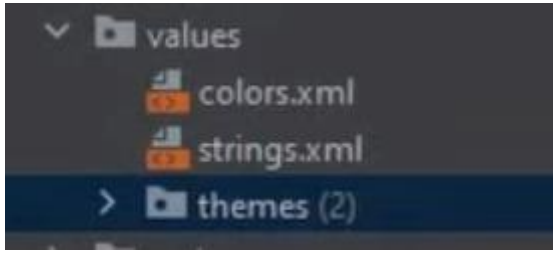
Step 3: Add background color



colors.xml

```xml
<?xml version="1.0" encoding="utf-8"?>
<resources>
    <color name="black">#FF000000</color>
    <color name="white">#FFFFFFFF</color>
    <color name="gold">#FAAF0F</color>
</resources>
```

Step 4: Add Theme to themes.xml file



themes.xml

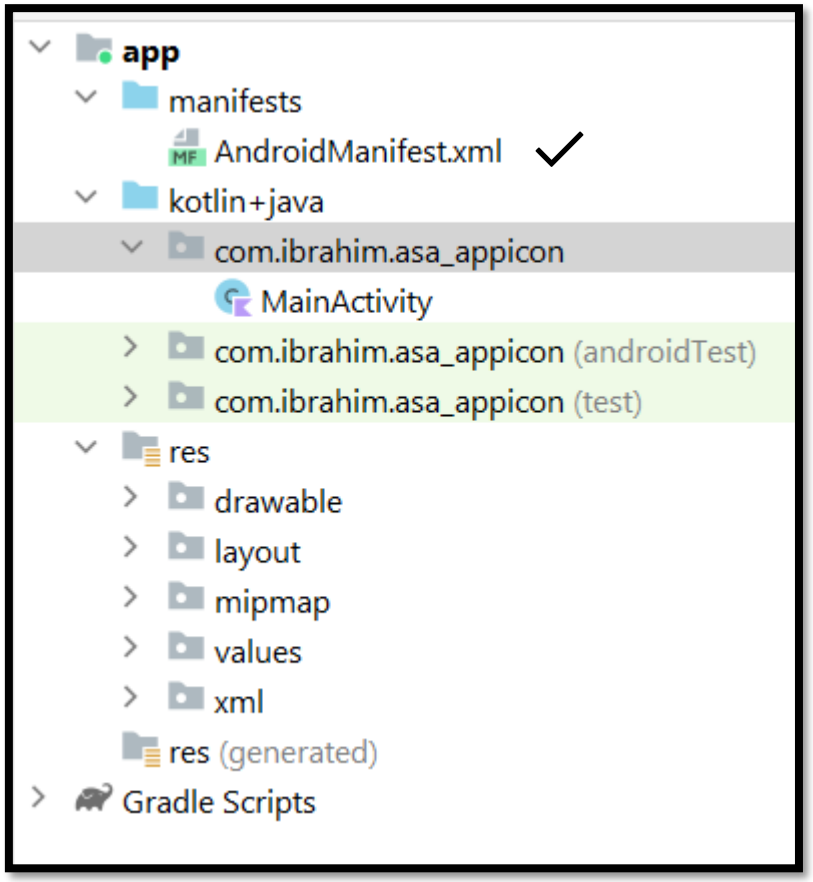
```xml
<resources xmlns:tools="http://schemas.android.com/tools">
    <style name="Theme.ASA_AppIcon" parent="Base.Theme.ASA_AppIcon" />

    <!-- Base application theme. -->
    <style name="Base.Theme.SplashScreenLogo" parent="Theme.MaterialComponents.DayNight.DarkActionBar">
        <!-- Customize your light theme here. -->
        <item name="colorPrimary">@color/gold</item>
        <item name="colorPrimaryVariant">@color/gold</item>
        <item name="colorOnPrimary">@color/gold</item>
        <item name="android:statusBarColor">?attr/colorPrimaryVariant</item>
    </style>

    <style name="Theme.SplashScreenLogo" parent="Base.Theme.SplashScreenLogo" />

    <style name="Theme.App.SplashScreen" parent="Theme.SplashScreen">
        <item name="windowSplashScreenBackground">@color/gold</item>
        <item name="windowSplashScreenAnimatedIcon">@drawable/splashscreenlogo</item>
        <item name="postSplashScreenTheme">@style/Base.Theme.SplashScreenLogo</item>
    </style>
</resources>
```

Step 5: Add Theme to AndroidManifest.xml file



themes.xml | AndroidManifest.xml

```xml
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools">

    <application
        android:allowBackup="true"
        android:dataExtractionRules="@xml/data_extraction_rules"
        android:fullBackupContent="@xml/backup_rules"
        android:icon="@mipmap/ic_launcher"
        android:label="ASA_AppIcon"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportsRtl="true"
        android:theme="@style/Theme.SplashScreenLogo"
        tools:targetApi="31">
        <activity
            android:name=".MainActivity"
            android:theme="@style/Theme.App.SplashScreen"
            android:exported="true">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>

</manifest>
```

Step 6: Change MainActivity

MainActivity.kt

```kotlin
package com.ibrahim.asa_appicon

import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import androidx.core.splashscreen.SplashScreen.Companion.installSplashScreen

class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        Thread.sleep( millis: 3000)
        installSplashScreen()
        setContentView(R.layout.activity_main)
    }
}
```
